Ashish Krishan, former Intern at Defence Research and Development Organisation (2017)

Answered Jun 20, 2017

A Haar Cascade is basically a classifier which is used to detect particular objects from the source. The haarcascade_frontalface_default.xml is a haar cascade designed by OpenCV to detect the frontal face. This haar cascade is available on [github](https://github.com). A Haar Cascade works by training the cascade on thousands of negative images with the positive image superimposed on it. The haar cascade is capable of detecting features from the source.
